

NEW! \$1,500 Power Smart Rebate

(for Single Family Detached Houses rated **EnerGuide 80 or above.**)*

BC Hydro Power Smart has just approved an increase in financial incentives, from \$400 to **\$1,500 for single family detached homes** participating in the Power Smart New Home Program.

With planned amendments to Part 10 of the BC Building Code in 2011, single family detached builders will need to plan ahead to meet the anticipated EnerGuide 80 code for new home construction.

Power Smart wants to help.

Power Smart has assisted builders since 2006 with incentives to achieve first EnerGuide 77 and recently EnerGuide 80. While townhouse builders and MURB builders can effectively achieve EG80, many single family detached builders will still face challenges.

To find out how your company can benefit from the \$1,500 Power Smart New Home incentive, contact Hometech Energy Solutions today for details at 1 800 561-0708.

The incentive will apply to new SF detached homes with building permits from July 15, 2010 onward, and it looks like the new incentive cut off will be March 2011.
